

Socket Stones

Socket Stone system

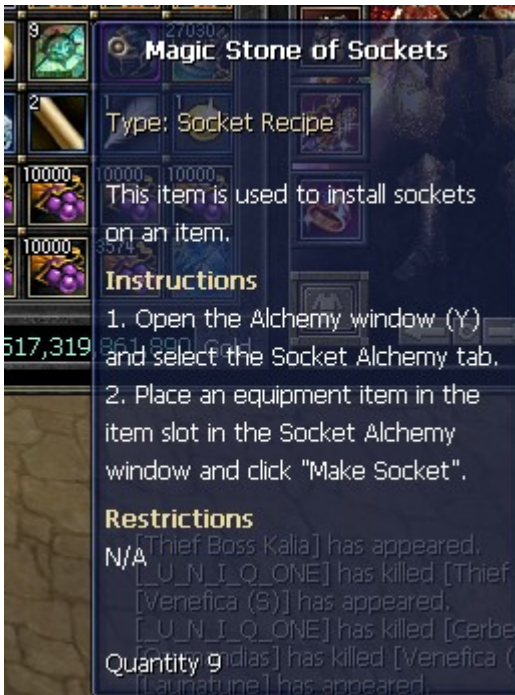

and if you right click on top of the weapon:

you can drag the skill to your keybinds

First thing you need to do is to unlock the **socket** slot on the weapon, first go to General Trader NPC in Alexandria to buy the Item MAGIC STONE OF SOCKETS

open alchemy window and check socket alchemy tab,

you should find something that looks like this:

Press Make socket and it will turn your cursor into a pickaxe, press one of the locked slots and it will open it.

You can have up to 3 **socket** slots on the weapon

When you do the **socket** alchemy, the level of the **socket** stone is random. To apply a socket stone simply drag the stone on top of an unlocked slot and press yes on the confirmation window.

As you can see you will need CTF(capture the flag) coins to acquire the socket stones.

To get ctf coins you must first wait for this warning to appear

Once this notice appears you can go to any Event So-Ok and register.

When you enter the Capture the flag arena you will have some mobs in your camp, you will need to kill them until they drop a key which will unlock the barrier allowing you to go get the flag or to go to the enemy camp.

Once this happens your main objectives will be;

#1 Kill as many players as you can, each kill will reward you with ctf coins directly to your inventory as you kill them so make sure you have space in your inventory or you might not get some of the coins

#2 Take the flag to the flagpole on your side, to take the flag at any time EXCEPT when on your own flagpole you just need to interact with it similar to how you use any npc in the game.

CTF RULES

In CTF you cant use multiple chars to get CTF coins

You also cant take enemy team key, accidents may happen but the abuse of such accidents can and will be punished

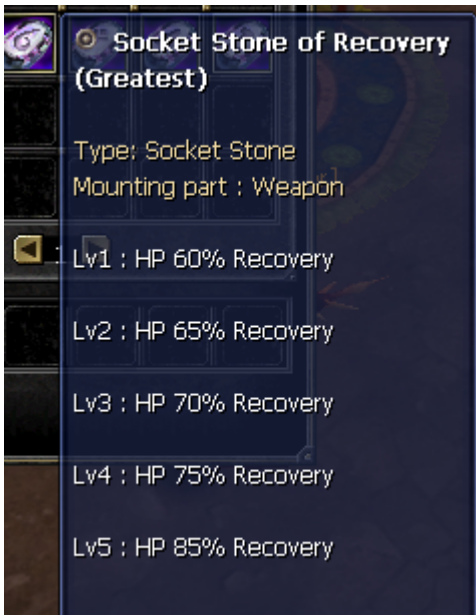

To remove socket stones you will need an item called Destroyer Rondo you can get it in item mall(f10)

when you have the item in your inventory the option remove socket will be enabled

Sockets have different levels

you might not get the max level on first try so you will need to remove the socket stone from your weapon a couple of times until you finally hit the max level.
