

F1 Slot keeps resetting

The most common fix is to delete the "**setting**" folder from your ExaySRO root folder.

Start **Silkroad.exe**, enter game and save your new settings/resolution and others.

Press **ESC** and **Exit** game. Check the "**setting**" folder to see if new files have been created.

If your resolution resets every time you start your client, check if "**setting**" folder is created after you delete it.

If there is no "**setting**" folder, close ALL clients, create it manually, start the game without bot, start **Silkroad.exe**, enter game and save your new settings/resolution and others.

Press **ESC** and **Exit** game. Check the "**setting**" folder to see if new files have been created.

If "**setting**" folder exists but no files inside, do the same, close all, enter game, save resolution, press ESC to quit game and check if files were created in "**setting**" folder.

⚠ **Silkroad.exe** should be start as Administrator!

Revision #5
